Outreach camp at District Hospital Kargil

Date: 3rd to 8th July 2023

A week long outreach camp was conducted at District Hospital Kargil to help streamline patient flow in process of creating ABHA Ids. The camp aimed at resolving multiple issues citizens face while creating or using ABHA cards, such as invalid cards, forgotten Ids, phone number not linked to Aadhar etc. Another area of focus was to encourage people to create and use ABHA Ids within hospitals to reduce waiting times and to help them access digital records through ABHA app.

U WIN training

Two day training with U WIN for integration with ABDM. U Win is a digital solution for Universal Immunization Program to facilitate tracking of every pregnant woman, new born, child & adolescent vaccination. The training focused on integrating U WIN on ABDM digital platform to homogenize access to healthcare.

Microsites in ABDM

A Microsite is a defined universe of healthcare stakeholders interconnected by a common characteristic, such as presence within a defined geographical area, common ownership, or being part of a common association/group, etc. Microsites are implemented with the objective of countering various challenges encountered in ABDM adoption, especially for private sector providers. Focused outreach efforts within a Microsite can increase awareness about ABDM and showcase the different benefits of ABDM for both patients and providers. ABDM implemented the first Microsite in Mumbai, Maharashtra in October 2022. Similarly, two more Microsites were started in Gujarat, at Ahmedabad and Surat in March 2023.

Health Mela at PHC Chuchot

Date: 14th July 2023

Health ids were created using ORS, ABDM website, Facility login and ABHA app. Citizens visiting the mela were informed about the benefits of ABHA Ids, ease of access using ABHA app and the significance of linking health records to ABHA ids.

Block Level Training in Tangtse Block

Date: 26th July 2023

An interactive workshop was conducted with the Community Health Workers (CHW), including ANMs and Community Health Officers (CHOs) of Tangtse Block. The workshop focused on enhancing the understanding and skills of CHWs to create Health IDs/ABHA from various interfaces, resolving multiple technical issues, and linking health records from different programmes. Post training a whatsapp support group for the trainees was also created to provide continuous support to ground level workers and help them with resolution of procedural issues during creation and linkage of ABHA ids.

Microsite visit to Mumbai

Date: 28th July 2023

As part of the endeavor to help ABDM to expand its footprint among private healthcare providers across the country, a four-member team from UT Ladakh visited Mumbai to gain insights from existing clinics participating in the microsite project. The Ladakh team's visit to Mumbai was instrumental in understanding the operational dynamics and advantages of such microsites. The team along with representatives from NHA and local implementation organizations visited multiple clinics that were already part of the microsite project. There they conversed with doctors and medical professionals who shared their experiences and firsthand knowledge of being part of ABDM.

The primary goal of the visit was to learn from Mumbai's successful implementation and adapt those best practices to establish similar microsites in UT Ladakh. By encouraging private sector participation in healthcare, ABDM aims to enhance access to better-quality care in remote regions like UT Ladakh.
